

## Transform Your Business with Arctiq's Generative AI Solutions

Platform Engineering

Generative AI is a transformative technology. Gartner predicts that by 2026, more than 80% of enterprises will either use or have deployed their own Generative AI solutions. Now, more than ever, it's crucial to understand how GenAI powered products and services can reduce cost and drive value to your business – as well as how they can create additional risks. If an application you rely on to manage your business leverages AI, are you confident you can exploit the benefits and mitigate the risks?

Tailored to meet you wherever you are on your journey, Arctiq can help you envision GenAI in your business and give you the confidence to navigate the risks and opportunities with a clear, actionable framework for evaluating AI applications.

### AI Strategy

Unlock the possibilities of AI with a clear, customized framework that enables innovation and manages risk.

#### Enterprise AI Workshops

Dive into the world of AI with high-level training sessions, perfect for business leaders, risk managers, and developers. Understand what AI can do for you and where it can drive value, as well as how to mitigate potential risks.

#### Strategic AI Development

AI is coming to the software you use every day. Get ahead of the curve and develop a comprehensive AI strategy that aligns with your business goals and risk management frameworks.

#### First and Third Party AI GRC Assessment

Gain insights into governance, risk, and compliance issues specific to AI in products you're looking to build or acquire, ensuring your AI enabled choices are robust and security and safety-conscious.

#### AI Systems Architecture & Red Teaming

Design robust AI solutions tailored to your needs and test their resilience through rigorous assessments.

## AI Platforms

Secure, scalable AI solutions—your way.

### On-Premises & Managed Public Cloud

Whether you prefer the control of on-premises solutions or the flexibility of the cloud, and whether you're doing inference or training, Arctiq's infrastructure and automation expertise can help you deliver secure and efficient AI solutions.

### Custom Hardware & Cloud Solutions

Choose the best infrastructure for your needs with our expert guidance and support.

## ML Ops

Transform your data into actionable insights with precision and ease.

### Data Pipeline & Tooling Development

Whether you're augmenting AI tools with retrieved data or building machine learning models, AI/ML value begins with data pipelines that ensure your data is clean, consistent, and structured for consumption.

### Integrate and Deliver AI Solutions

Unify AI applications and operations with pipelines that train, tune, store, release, and deploy models – ensuring governance and velocity.

## AI for Developers

Boost developer productivity and modernize legacy systems.

### GitHub Copilot Enablement

Help your developers get the most out of AI code assistance tooling through specialized enablement and training (potentially funded by Microsoft).

### Code Modernization Programs

Quickly transform legacy codebases using advanced tools like Moderne or Amazon Q, allowing you to reduce total cost of ownership of existing legacy software.

### Rapid Scaffolding & Code Reuse

Turn ideas into code faster and more efficiently using tools like Crowdbotics and Copilot Workspaces to accelerate your software development lifecycle.

CIOs are asking their developers to deliver more value, more quickly – and AI coding assistants, like GitHub Copilot, help them deliver on that promise. GitHub reports that nearly 75% of developers felt more fulfilled, less frustrated, and better able to focus when using Copilot, and 88% reported being more productive. But getting the most out of Copilot requires strategy and planning. Financial institutions, telcos, and other enterprises have looked to Arctiq to help them evaluate the productivity that Copilot can help enable, provide laser-focused training to ensure their developers really are able to deliver better code faster, and assist them in rolling up Copilot insights into the way they measure and track productivity.

## AI For Business

Integrate AI into your products for smarter, more responsive applications.

### AI-Led Product Development

Let Arctiq help you integrate AI into your existing product stack. Identify quick wins and value drivers and build confidence in AI solutions from chat to annotation to summarization. Arctiq can help you enhance functionality and improve user experience.

### Process-Driven AI

How can AI solutions enable your business to do great things faster? Let Arctiq's expertise be your guide in how AI can help your teams from Sales to HR.

## Start Your AI Journey with Arctiq

Whether you're just beginning to explore AI or looking to enhance your existing deployments, Arctiq provides the expertise and support you need. Our tailored solutions ensure you can confidently navigate the complexities of AI, transforming potential into performance.
