

Engineering Best-in-Class Platforms for Enterprise Software Delivery

Arctiq's Platform Engineering solutions are dedicated to providing top-tier platforms for the Enterprise Software Development Lifecycle (SDLC). Our focus is on driving excellence in development practices, enhancing developer experiences, and accelerating the delivery of secure, high-quality software.

Developer Experience

We are committed to helping organizations onboard developers and form productive teams quickly within the SDLC.

- Assessments
- Developer Workflow Consulting
- AI-assisted Development

API Strategy and Management

We accelerate innovation by helping organizations organize, securely manage, and publish their APIs into developer portals for streamlined access.

- API Gateways
- Developer Portals

Application Modernization and Kubernetes

We assist organizations in adopting cloud-native patterns using containers and Kubernetes on various target platforms. We specialize in refactoring applications from monoliths to microservices and help teams manage these modern platforms effectively.

- Kubernetes
- Containers
- OpenShift Container Platform

DevOps and DevSecOps

We streamline the entire software delivery process through automation, ensuring software quality and security standards are upheld. By providing early security feedback, we proactively prevent deployment of unsafe software and configurations.

- CI/CD & GitOps Design
- Infrastructure as Code
- Automation with Ansible
- Application Security Integration into CI/CD (SAST, DAST, SCA, etc.)

Observability and SRE Consulting

We provide essential signals for enhanced operational awareness, educate on SRE practices, and offer an end-to-end observability platform for informed decision-making.

- Assessments
- Observability Integration
- Performance Management Integration into CI/CD

Data Strategy and Engineering

We assist customers in becoming data-driven organizations through focused consulting, helping them unlock the value of data across their enterprise.

- Data Strategy
- Data Architecture
- Event-Driven Architectures
- Data Warehouse/Lakehouse Design & Build
- Data Migration Projects
- AI/MLOps

Financial Operations (FinOps)

We maximize the ROI of cloud and on-premises resources by providing consumption modeling and optimization services.

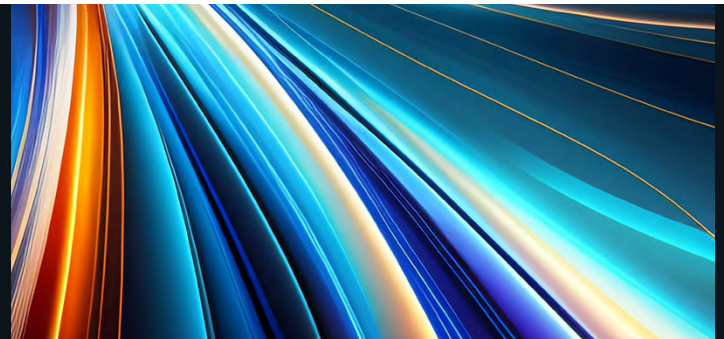

Partner Alignment

Arctiq partners with leading vendors to deliver stellar solutions in various domains, including:

- | | | |
|------------|-----------------|--------------|
| Cisco | Harness | Pure Storage |
| Cloudflare | HashiCorp | Red Hat |
| Dell | Hitachi Vantara | Snyk |
| Dynatrace | HPE | Sysdig |
| Fortinet | Lacework | Tufin |
| GitHub | Microsoft Azure | And More... |
| GitLab | NetApp | |
| Google | Portworx | |

Business Drivers and Challenges

We're here to align your IT strategy with your business objectives and tackle the challenges that matter most to you.

Streamlining Team Onboarding

Software Delivery Efficiency

Proactive Incident Management

Cost Accountability in the Cloud

Modernization

Complex Coordination

Integration Challenges

Breaking Data Silos
